PROJECTS

Exploring LLMs for NL2Vis

April 2023 – Oct. 2023

- Conduct an empirical study to evaluate LLMs potential in generating visualizations.
- Investigate different approaches to feed the structured tabular data into LLMs.
- Propose to iteratively update the results via optimization strategies.
- Published at **SIGMOD 2024**, first author, co-advised by Prof. Hongyu at Tsinghua University.

A counterfactual explanation for GNN in vulnerable detection

Jun. 2023 – Dec. 2023

- Motivated by “why my code is detected as vulnerable?”
- CFExplainer aims to identify a minimal perturbation to the code graph input that can flip the detection system’s prediction from “vulnerable” to “non-vulnerable”.
- Published at **ISSTA 2024**, co-author, collaborated with Prof. Yulei Sui.

Exploring LLMs as Evaluator for Code Summarization

Sep. 2023 – Mar. 2024

- Explore LLMs for assessing code summarization without references.
- Prompt LLMs to adopt diverse roles in evaluating generated summaries across multiple dimensions.
- Find LLM-based evaluator significantly improves the correlation with human perception.
- Submitted to **ICSE 2025**, first author, collaborated with the BDSC lab of Prof. Philip S. Yu.
